You have a choice in IUD options—

help others have the same choices.

Liletta® 🌷
(levonorgestrel-releasing intrauterine system) **52 mg**

An IUD that lets women help women

Indication

LILETTA® (levonorgestrel-releasing intrauterine system) 52 mg is a hormone-releasing system placed in your uterus to prevent pregnancy for as long as you want for up to 3 years.

IMPORTANT RISK INFORMATION ABOUT LILETTA

- Do not use LILETTA if you:
  - Are or might be pregnant; LILETTA cannot be used as an emergency contraceptive
  - Have had a serious pelvic infection called pelvic inflammatory disease (PID), unless you have had a normal pregnancy after the infection went away (PID occurs in less than 1% of users)

See Important Risk Information throughout and accompanying Brief Summary.

(levonorgestrel-releasing intrauterine system) **52 mg**

Our mission is to expand access

When you choose LILETTA, you are choosing more than just a hormonal intrauterine system (otherwise known as an intrauterine device or IUD)—*you are choosing to help* all IUD-appropriate women have access.

Medicines360 is a unique nonprofit women's global pharmaceutical company that was formed in 2009 with a mission to develop quality women's health products and bring them to market in a way that helps expand access to women in need. We developed our first product—LILETTA—for the sole reason of making it available to all IUD-appropriate women regardless of their insurance coverage. We formed a groundbreaking partnership with Allergan to bring LILETTA to market using innovative approaches to help expand access to LILETTA.

IMPORTANT RISK INFORMATION ABOUT LILETTA (cont.)

- Do not use LILETTA if you (continued):
  - Have an untreated pelvic infection now
  - Have had a serious pelvic infection in the past 3 months after a pregnancy
  - Can get infections easily; For example, if you:
    - Have problems with your immune system
    - Have multiple sexual partners or your partner has multiple sexual partners
    - Use or abuse intravenous drugs
  - Have or suspect you might have cancer of the uterus or cervix
  - Have bleeding from the vagina that has not been explained
  - Have liver disease or liver tumor
  - Have breast cancer or any other cancer that is sensitive to progestin (a female hormone), now or in the past
  - Have an intrauterine system (IUS) in your uterus already
  - Have a condition of the uterus that changes the shape of the uterine cavity, such as large fibroid tumors
  - Are allergic to levonorgestrel, silicone, polyethylene, or barium sulfate

Join us to overcome healthcare barriers for women

In addition to being available to insured patients, LILETTA is offered at a low price to public health clinics which are enrolled in the 340B Drug Pricing Program. Additionally, proceeds from LILETTA further our mission by funding the development of other products and approaches to expand healthcare access for women, and to help expand access in developing countries.

You can help us achieve this goal and help other women in need by choosing LILETTA.

IMPORTANT RISK INFORMATION ABOUT LILETTA (cont.)

- Call your healthcare provider right away if you think you are pregnant. If you get pregnant while using LILETTA, you may have an ectopic pregnancy. This means that the pregnancy is not in the uterus. Unusual vaginal bleeding or abdominal pain may be a sign of ectopic pregnancy. Ectopic pregnancy can cause internal bleeding. There are also risks if you get pregnant while using LILETTA and the pregnancy is in the uterus. Severe infection and premature delivery can occur with pregnancies that continue with an intrauterine system (IUS)
- Although uncommon, pregnancy while using LILETTA can be life threatening and may result in loss of pregnancy or fertility
- Bleeding and spotting may increase in the first 3 to 6 months and remain irregular. Periods over time usually become shorter, lighter or may stop

See Important Risk Information throughout and accompanying Brief Summary.

Be a part of helping provide choice and access.

Choose LILETTA (levonorgestrel-releasing intrauterine system) 52 mg and support our mission.

IMPORTANT RISK INFORMATION ABOUT LILETTA (cont.)

- Life-threatening infection can occur within the first few days after LILETTA is inserted. Call your healthcare provider immediately if you develop severe pain or fever shortly after LILETTA is inserted

- Some IUS users get a serious pelvic infection called pelvic inflammatory disease (PID). PID is usually sexually transmitted. You have a higher chance of getting PID if you or your partner has sex with other partners. PID can cause serious problems such as infertility, ectopic pregnancy or pelvic pain that does not go away. More serious cases of PID may require surgery. Removal of the uterus (hysterectomy) is sometimes needed. In rare cases, infections that start as PID can even cause death. Tell your healthcare provider right away if you have any of these signs of PID: long-lasting or heavy bleeding, unusual vaginal discharge, low abdominal pain, painful sex, chills, or fever

- LILETTA may come out of your uterus. This is called expulsion. Expulsion occurs in about 3 out of 100 women. You may become pregnant if LILETTA comes out. If you think that LILETTA has come out, use another birth control method like condoms and spermicide or do not have sex (vaginal intercourse) until you are seen by a healthcare provider

- Ovarian cysts may occur but usually disappear

LILETTA does not protect against HIV or STDs.
